# THIRTY-FIFTH ANNUAL REPORT

OF THE

## BOARD OF SUPERINTENDENCE OF THE DUBLIN HOSPITALS.

TO HIS EXCELLENCY THE RIGHT HON. ROBERT  
OFFLEY ASHBURTON, BARON HOUGHTON,

*Lord Lieutenant-General and General Governor of Ireland.*

35, Dawson-street.

2nd May, 1893.

MAY IT PLEASE YOUR EXCELLENCY :

We have the honour to lay before your Excellency our Thirty-fifth annual Report on the condition and management of the City of Dublin Hospitals receiving Parliamentary grants, and which were duly inspected by us during the year ended 31st March, 1893.

These are :—

1. Westmorland Lock Hospital.
2. The House of Industry Hospitals, viz :—
  - a. Hardwicke Fever Hospital.
  - b. Whitworth Medical Hospital.
  - c. Richmond Surgical Hospital.
3. Steevens's Hospital.
4. Meath Hospital and County Dublin Infirmary.
5. Cork-street Fever Hospital.
6. Rotunda Lying-in Hospital.
7. Coombe Lying-in Hospital.
8. St. Mark's Ophthalmic Hospital; and
9. Royal Hospital for Incurables, which receives a portion of the Concordatum Fund.

As mentioned in former Reports, our inspections are made without any previous notification to the officials of the several Hospitals.

We inquired into the condition of each Institution, to ascertain if the buildings were in good order, the general management

satisfactory, and if due provision were made for the comfort and welfare of the patients.

We examined the dietaries in use, and the manner of serving the food to the patients.

Considering the necessity of special, or invalid cooking, to promote recovery in a certain class of cases, we endeavoured, as in our Thirty-third Report, to impress on the authorities the importance of having properly qualified cooks, to prepare such food. We regret to observe that in several hospitals scarcely sufficient care is bestowed on this subject, which is, in some cases, even more important than the administration of medicine.

We recommend that in all Hospitals the Matron or Lady Superintendent should provide the staff nurse in charge of each ward with a Stock Book, in which should be entered every article of linen, or other articles under her immediate charge, recording the date when such articles were supplied, lost, broken, renewed, or cast. The Matron should inspect and examine these books every three months, and initial and date the book at each inspection.

An epidemic of cholera having prevailed during the year on the continent of Europe, and as several alleged cases had occurred in England, we deemed it of the utmost importance to ascertain that due provision be made for the reception and treatment of the first cases that might appear, should the epidemic extend to this city.

The Governors of the House of Industry Hospitals have signified to us that they had appropriated forty beds for such patients, and that means had been provided for thorough disinfection of all materials used, and the destruction of such clothing as might be deemed necessary.

The Standing Committee of the Meath Hospital intimated that they had two detached wards for epidemic diseases, containing five beds each—one for males, the other for females—which could be used for cholera patients, and in case this accommodation should prove insufficient, the Committee would, as on former occasions of a like visitation, erect on the grounds of the Hospital, sheds for the reception and treatment of this disease.

The Standing Committee of Cork-street Fever Hospital could have 100 available beds should no other epidemic prevail at that time.

The Dublin Corporation, in addition to the usual grants to the City Hospitals, have, in their estimates for next year, provided for the sum of £500 as a provision to meet the threatened appearance of cholera.

We are of opinion that it would be advisable to invite the active co-operation of nurses, and to enrol them for service in the event of an epidemic assuming a severe form.

In our last Report we expressed a hope that an Institution in connection with our City Hospitals should be endowed and equipped for pathological, chemical, and bacteriological research, such an Institution being urgently needed in the interests of medical science;

Hospital  
accommoda-  
tion for  
Cholera  
Patients.

We venture also to suggest the advisability of having *post-mortem* examinations made under the supervision of skilled pathologists connected with this proposed Institution.

In the interests of justice, all autopsies in medico-legal cases should be specially conducted by these officers.

Should effect be given to this project, an ample supply of material would be available for systematic pathological teaching, and special certificates could be issued to students for this important branch of medical knowledge.

The various Statistical and other Tables in Appendices will be found similar in character to those that have hitherto appeared in regular annual sequence, but at the same time indicative of the relative changes and results in the operation of the different institutions.

The financial accounts are rendered in a uniform system, so that it can be seen whether any Hospital is extravagant in its expenditure as compared with others.

On the 1st of April, 1892, there remained 867 patients in these Hospitals under the supervision of our Board.

The number admitted during the year was 9,504, making the whole number under treatment 10,371, of whom 9,072 left the wards either cured or relieved, or were discharged for other causes, and 402 died.

Seven hundred and eighty patients remained under treatment in these Hospitals on the 31st March, 1893.

Exclusive of incurables, the mortality was 4.61 per cent. on those treated to a termination.

The total daily average number of beds occupied in these Hospitals throughout the year was 745.52.

The time spent in Hospital by each patient under treatment (omitting the patients in the Royal Hospital for Incurables) averaged 20.95 days.

Appendix.—Table No. 1 shows a list of diseases of patients treated in the several Hospitals and the number that died of any particular disease during the year ended 31st March, 1893.

Table No. 2 shows the average cost per bed occupied throughout the year ending 31st March, 1893, for maintenance and for establishment, and for both, exclusive of buildings and furniture.

Table No. 3 shows the several sources of income of each Hospital.

Table No. 4 sets forth in detail the chief heads of expenditure of each Hospital.

Table No. 5 gives the number of patients treated in each Hospital, the mortality per cent., the average daily number of beds occupied during the year, and the present extent of accommodation for each class of patients.

Table No. 6 shows the prices of articles supplied to each Hospital per contract or otherwise.

Table No. 7 gives the various dietaries in use in each Hospital.

Table No. 8 gives the names of the Governors of each Hospital, and number of attendances during the year.

## WESTMORLAND LOCK HOSPITAL.

On the day of inspection there were 100 patients under treatment, all of whom were well cared and looked after. The Hospital service appeared to be conducted with regularity, and due discipline. Satisfactory replies were given to us by the patients whom we interrogated as to the care bestowed on them by the attendants. Several sanitary improvements have recently been provided, including five new white enamel ware baths, and improved water closet accommodation. We were also pleased to see a new Protestant Chapel in course of renovation for the use of the Protestant patients who enter the Hospital. The wards were clean and orderly, and the bed clothes were neatly arranged; the supply of towels appeared inadequate, a nurse having stated to us that there was but one roller towel for the inmates of an entire ward. Since our last visit a well arranged and ventilated apartment has been allotted for storing the patients' clothes, the articles being stacked and numbered.

The kitchen arrangements and utensils appeared to be good and sufficient, and the cooking and distribution of diets and extras conducted according to regulation. A new cooking range has been put up which is said to be economical as to fuel.

The dietary books and registers were examined and found carefully and accurately kept.

The Medical Officers believe that of late years the virulence of the disease has diminished, which may be ascribed to the fact that patients find ready access to this Institution, the doors of which are always open to those who need its aid.

The faulty position of the laundry situated in the basement immediately beneath an occupied ward is unchanged. We expressed the opinion in our last Report that nothing could be more contaminating to the sick above, or more unwholesome to the inmates, than the fumes from linen fouled by the excretions of the patients. We have since been informed by the Board of Governors that any change in this department is impracticable owing to limited space; they have, however, signified to us if funds were available for extension, or change of position, the alteration recommended by our Board would have attention.

The number of women who are delivered in the house averages about 25 in the year, they are attended by the Resident Surgeon who receives a fee of £1 for each case.

There were 63 in this Institution on the 1st April, 1892; 646 were admitted, and 12 infants were born in the house during the year; 633 patients were discharged; 17 died; and 71 remained on the 31st March, 1893.

The mortality was 2.61 per cent. on the total number treated to a termination.

The time spent in hospital by each patient averaged 37.31 days, and the average daily number of beds occupied during the year was 74.10.

### STEEVENS'S HOSPITAL.

No change of importance has occurred in this Hospital since our last report. The wards and other parts of the Hospital were in creditable order, being clean and well ventilated. The system of nursing by properly qualified nurses under the Lady Superintendent continues to give satisfaction, and tends much to hasten the recovery of patients.

The low mortality may be chiefly attributed to the large number of constabulary patients that are admitted, many for diseases that are comparatively less fatal than those that are usually admitted into general Hospitals.

The kitchen is imperfectly lighted; it being in the basement, this cannot well be avoided; but the cooking arrangements are of an excellent description, and the samples of food which we examined were good.

We have been informed that the matron is invariably present on the delivery of the provisions, she orders the meat from day to day, sees that it is of good quality, and that the weight is correct, and supplied according to contract. She has the direct supervision of the cook, and sees that the food is sent up to the wards properly prepared.

We requested the attention of the Managing Committee to the high cost for the maintenance of each bed (exclusive of establishment charges) being for the year ending 31st March, 1892, £25 4s. 5d. as compared with £19 13s. 4½d. in the Meath Hospital—an Institution similarly circumstanced.

The correspondence on this subject is published in Appendix.

On the 1st of April, 1892, 104 remained in Hospital; 939 were admitted during the year; 914 were discharged; 42 died; and 87 remained on the 31st March, 1893.

The mortality was 4.39 per cent. on the total treated to a termination.

The time spent in Hospital by each patient averaged 24.67 days, and the average daily number of beds occupied during the year was 70.50.

### THE MEATH HOSPITAL.

On visiting the several departments of this Hospital we were much gratified by the order, regularity, and cleanliness which prevailed.

The patients were treated with all the care and attention which their condition requires.

The nursing staff consists of the Lady Superintendent, seven trained nurses, and twelve probationers.

The store-rooms, and culinary departments are well arranged, and the provisions were of good quality.

We noted with approval that great attention is paid to the variety of diets, fish and pudding, &c., being liberally supplied to the patients.

The water-closets, baths, and lavatories, were in good order, hot and cold water being laid on. There was proper provision for emptying and rinsing spittoons and ward utensils. The bed urinals in use are of glass, they were clean and free from odour. We recommended in our Twenty-second Report the substitution of glass for porcelain urinals, as the imperfection of the glazing of porcelain favours the deposition of organic matter, which renders the vessel offensive, and most difficult to keep clean. It is to be hoped that other Hospitals may adopt this suggestion.

The training school for nursing in connection with this Hospital has proved a success, and has to a great extent revolutionized both Hospital and private nursing throughout the country.

We can once more speak in terms of praise of the Medical Wards in the Barber Wing. The excellence of this part of the Hospital (having windows on either side, which admit the morning and evening sunlight, and facilitate ventilation) leaves nothing to be desired.

We were not altogether quite satisfied with the condition of the surgical wards; the beds were all occupied, and in too close proximity; we have in previous Reports maintained that each patient should have at least 1,200 cubic feet, and that there should be an area of 100 superficial feet for each bed.

To make this Hospital attain its fullest usefulness it would be necessary to have more extended accommodation for surgical cases, and we hope funds may be available to build an additional structure similar to the Barber Wing for the reception of such patients.

The apothecary's department has been improved. The shop cleaned down and painted, and a complete set of new stock bottles, &c., provided. Care has been taken to prepare and keep ready for immediate use antidotes for all poisons in case of an emergency. The main building of the Hospital is as perfect as it can be made, and is supplied, and furnished, with every modern requirement up to date; we cannot say, however, we altogether approve of the condition of the detached Fever Wards which are too small, and not arranged according to modern views. We were informed by the Secretary that the Managing Committee had in contemplation the building of a new and commodious wing, or detached building, for the reception of patients suffering from infectious diseases. We trust funds will be forthcoming to enable the Committee to carry out this desirable object.

The inside of the Hospital throughout has been thoroughly cleaned and painted at a cost of £355 9s. 11d. The work has been satisfactorily done, and has added not only to the appearance but also the cleanliness, comfort, and healthiness of the wards.

Five new Crosthwaite's grates, with mantel-pieces and tiled hearths, have been supplied and erected at a cost of £42.

Also a new and improved kitchen range has been erected at a cost of £54 10s., and has since worked admirably well.

The Account Books and Registers appeared to be carefully and accurately kept, and the Returns testify to the care bestowed in the disbursements of all funds.

There were 104 patients in this Hospital at the commencement of the year; 1,244 were admitted; 1,188 discharged 66 died and 94 remained on the 31st March, 1893.

The mortality was 5.26 per cent. on the total number treated to a termination.

The time spent in Hospital by each patient averaged 23.99 days, and the average daily number of beds occupied during the year was 88.60.

#### CORK-STREET FEVER HOSPITAL.

On inspection we were pleased to find that this Institution continues to be efficiently conducted in all its departments. The buildings were in repair and great attention is given to adopt modern hygienic requirements. The patients were well attended to. The different descriptions of food were good, and the cooking satisfactory. The wards presented a cheerful appearance, and the beds and bedding were properly looked after. The nursing is carried out under a Lady Superintendent, with eight staff nurses and assistant staff nurses and five probationers. There are also four or five probationer nurses in training from Baggot-street Hospital who receive no pay, but are fed in the Institution.

The ambulance belonging to the Hospital was in good order and provided with easy springs, and varnished on the inside to facilitate disinfection, which process, we were informed, was carefully carried out when deemed necessary.

We are of opinion that a trained attendant should accompany serious cases, and she should be provided with restoratives in the event of such being required. It appears also to us that it would be advantageous to the sick to have the interior furnished with rubber air mattresses, cushions, and hot-water bottles, and to have rubber tyres attached to the wheels. We are glad to find that this Hospital, unlike most institutions, is solvent as regards its funds. The Managing Committee, however, report with regret that the Dublin Corporation have seen fit to reduce the presentment of £300, usually paid to this Hospital, to half that amount, viz., £150. We believe that this was for no want of confidence in the Hospital or in its management, but because there has not been in recent years any epidemic of fever to fill the Hospital.

On the occasion of our visit we observed great progress had been made in the building of the new Epidemic Hospital, which is to replace the old wooden house, originally erected as a temporary Hospital during the small-pox epidemic. Of this structure we cannot report as fully as we could wish until its completion, but we have been informed that it is to comprise two storeys and to hold forty patients, distributed in four wards, each storey to be completely isolated from the other.

Although the demands on the Hospital during the past year have been very great, owing to the many varieties of infectious disease treated at the one time, it was able to meet them, and never failed to accommodate every different disease with the necessary isolation. Two small-pox patients were perfectly segregated in the House of Recovery, and the two nurses in charge were not permitted to enter any other part of the Hospital. The bedding and clothes of these patients, together with the nurses' uniforms, and in fact everything that came in contact with the variola poison, has been destroyed, so that the spread of disease has been prevented.

With regard to the comparative high cost of this Institution, we deemed it our duty to address a communication to the Managing Committee, and they have signified to us in reply that the heavy expenditure is caused by the necessary isolation of infectious diseases.

At the commencement of the year 148 patients remained in the Hospital; 1,309 were admitted; 1,260 were discharged; 119 died; and 78 remained on the 3rd March, 1893.

The mortality was 8.62 per cent. on those treated to a termination. The average daily number of beds occupied was 84.90, and the time spent in Hospital by each patient averaged 21.26 days.

#### HOUSE OF INDUSTRY HOSPITALS.

Our inspection enables us to report favourably of these Hospitals. The various departments, including the wards, corridors, &c., presented throughout a bright aspect, which are made cheerful by prints on the walls. The tidiness, order, and regularity which everywhere prevail do credit to the authorities, and testify to the painstaking and conscientious manner in which the attendants discharge their duties.

The present nursing arrangements, which continue to give unqualified satisfaction, are carried out by seven staff sisters, twenty-eight trained nurses, and five probationers, under two lady superintendents.

The patients, whom we interrogated as to the care and attention bestowed on them, invariably gave satisfactory replies.

The provisions were of good quality, and the kitchen accommodation was ample.

The steward keeps the accounts, sees that the bills are correct in reference to the quantity of provisions received, and that a proper price is charged, according to contract.

We were informed that the accounts are examined and initialled by the Governors at each meeting of the Board.

The Governors being alive to the urgent necessity of anticipating a visitation of an epidemic of cholera or smallpox in this city, are taking immediate steps to meet any emergency that may arise, by making due provision for the reception, isolation, and medical treatment of patients affected with such diseases. In order to carry out effectually the complete isolation of cholera

and smallpox patients, it is imperative that accommodation for such must be found in a building wholly detached from the Hardwicke Hospital, which is reserved for ordinary fever cases.

The Governors have obtained plans and estimates for the conversion of the block comprising the chapel and fever nurses' dormitories into an epidemic hospital—and such plans and estimates are engaging their earnest attention and consideration. We have since been informed that the works are actually commenced.

In addition to the large expenditure which the building and equipment of the epidemic hospital will entail, it should be stated that the sewers and drainage system of the Hardwicke Hospital will also have to be attended to, and probably reconstructed. A new chapel will also have to be erected to replace that which now occupies the site of the present proposed Hospital.

We regret to report that all available funds have become exhausted, and a considerable debt incurred in effecting permanent and necessary improvements during the last four years. We hope that the Lords Commissioners of Her Majesty's Treasury may be pleased to give a grant in aid towards defraying the expenses of the building and maintenance of the epidemic Hospital, the necessity of which has been created by the present emergency.

#### HARDWICKE HOSPITAL.

Thirty-five patients remained in this Hospital on the 1st April, 1892; 564 were admitted during the year; 507 were discharged; 53 died; giving a mortality of 9·78 per cent. on the total number of cases treated to a termination.

The average daily number of beds occupied during the year was 33·17, and the time spent in Hospital by each patient averaged 21·43 days.

#### WHITWORTH HOSPITAL.

On the 1st of April, 1892, 41 patients remained in Hospital; 504 were admitted; 467 were discharged; 44 died; giving a mortality of 8·61 per cent. on the total number of cases treated to a termination.

The average daily number of beds occupied throughout the year was 34·62, and the time spent in Hospital by each patient under treatment averaged 23·18 days.

#### RICHMOND HOSPITAL.

There were 62 patients in this Hospital when the year commenced; 665 were admitted; 634 were discharged; 31 died; giving a mortality of 4·66 per cent. on 665 cases treated to a termination.

The average daily number of beds occupied in the year was 51·68; and the time spent in Hospital by each patient averaged 25·94 days.

## THE ROTUNDA LYING-IN HOSPITAL.

We carefully examined the several departments of this Institution, and found the buildings in good order, the wards clean and well ventilated, and the bedding neatly arranged.

The various articles of food, including bread, beef-tea, milk, &c, which we examined were found, without exception, of good quality. We were informed that the cook was efficient, but on the occasion of our visit we observed that the mutton chops to be served to the patients were fried. We have signified in previous Reports that this method of cooking for the sick was undesirable, and recommended that chops should be grilled on a properly constructed grate, the smoke being drawn away by a side flue, an arrangement which would prevent the meat being smoked and blackened. We also suggest that bread, butter, and other articles of diet be not kept in a store-room in close contact with soap and candles.

As a school for giving instruction in gynecological and obstetric teaching, it holds the highest reputation.

The patients receive every care and attention, and since antiseptic precautions have been adopted, this Hospital is no longer open to the charge of producing an undue mortality as formerly.

The accommodation for the reception and treatment of patients affected with diseases peculiar to women having been considered inadequate, the Governors have decided to erect a large and well appointed auxiliary Hospital in close connection with the existing buildings. It is intended to convert the old auxiliary Hospital into a residence for male officers and pupils.

We regret to find that the Dublin Corporation have withheld their annual grant, as they considered that they were not justified in appropriating the funds of the city to any institution over whose administration they have no control. We, however, hope soon to learn that arrangements have been arrived at to allow of the resumption of this payment.

At a special meeting of the Municipal Council on the 24th October, 1892, it was resolved:—

“That the sum of £250 be voted to the Governors of the Rotunda on condition that they carry out the recommendations contained in the Report of 1887, or make such other amendments in their constitution as will remove the objectionable features in its management, and that, in the meantime, the sum of £250 be placed to the credit of the Finance and Lease Committee.”

The several account books and registers of the Hospital were examined and found accurately and carefully written up to date.

On the 1st of April, 1892, there were 22 patients in the labour wards; 1,628 were admitted during the year; 1,269 were discharged after delivery; 341 were discharged, not having been delivered; 10 died; and 30 remained in Hospital at the end of the year.

Twenty-three patients remained in the auxiliary or chronic department on the 1st of April, 1892; 472 were admitted; 442 discharged; 17 died in the year ended 31st March, 1893; and 36 then remained.

The average daily number of beds occupied throughout the year by labour cases was 31.17, and that of the chronic class 27.79.

The time spent in Hospital by labour cases averaged 6.88 days, and that by the chronic class 20.49 days.

The mortality of the labour patients, deducting non-parturient cases, was .78 per cent., and that of the chronic class 3.70 per cent.

#### THE COOMBE LYING-IN HOSPITAL.

This important and useful Hospital has been efficiently worked during the past year as far as circumstances would admit. It has not failed in any respect to maintain its high reputation for gynaecological and obstetric teaching.

The wards were clean and well ventilated, and occupied in rotation, and as each is emptied it is thoroughly disinfected before patients are re-admitted. The beds and bedding were tidy, but the supply of linen was inadequate, the dietary was not sufficiently varied, and the cooking appliances were found deficient.

We suggest that the straw beds at present in use be dispensed with, and wire woven mattresses substituted. This would ultimately be more economical, and obviate the danger of fire which is incidental to the present arrangement of storing straw in the basement of the Hospital.

We were informed that the floors are scrubbed and washed twice a week, but we continue to be of opinion that staining and varnishing ward floors is more desirable. Frequent washing tends to carry organic matter into the open seams and under the boards where it accumulates, and under certain conditions is liable to give off dangerous emanations.

The Governing Corporation of this Hospital is self-elected, and limited to twenty-one members, without any reference to those subscribers who contribute to the support of the Institution. This system appears to us indefensible; a charitable Hospital should be governed by a committee elected by the subscribers.

The Commissioners of 1887, by whom all the conditions of this question had been carefully examined, had reported:—

"We cannot approve of this system of governing or supporting an Hospital, believing that the true system, so long as Hospitals are supported by voluntary subscriptions, is to allow any person who gives a certain donation, or subscribes a certain annual sum to become a Governor in the sense that he should be entitled to vote at the annual election of Governors to act as a Committee of Management."

Nineteen patients, labour cases, remained in Hospital on the 1st of April, 1892; 606 were admitted during the year; 430 discharged; 178 were discharged not having been delivered; 9 died; and 8 remained at the close of the year.

Eighteen patients remained in the chronic wards on the 1st of April, 1892; 221 were admitted; 224 discharged; 5 died; 10 remained at the close of the year.

The average daily number of beds occupied throughout the year by labour cases was 10.69, and by chronic cases 11.63.

The time spent in Hospital by labour patients averaged 6.24 days, and that by the chronic class 17.76 days.

The mortality of patients admitted to the labour wards, deducting 178 that were discharged, not having been delivered) was 9 deaths in 439 cases, or 2.05 per cent., and for the chronic class, 5 deaths, giving a mortality of 2.18 per cent.

#### THE ROYAL HOSPITAL FOR INCURABLES.

We are happy to report that the favourable comments we have so frequently made as to the general condition of this Hospital continue to be fully deserved.

On visiting the Victoria Jubilee Wing, we were much pleased with the four bright and cheerful wards which this part of the Institution comprises.

Considering its southern aspect and shaded position, we believe it to be admirably adapted for the reception and treatment of consumptive patients.

We observed many medical and surgical cases in the wards of considerable interest, which are rarely seen by students, for incurable patients are seldom kept in general hospitals beyond a few months. We regret to be informed that autopsies are not allowed to be made in this Hospital. On a former occasion we expressed a belief that this was from very kindly, but we thought mistaken, feelings, as it is known that patients do not object to resort to the hospitals in which they are aware that autopsies are made.

Should medical students be enabled to visit the wards under due regulations they would obtain much professional information, and medical education would be thereby promoted.

Having regard to the large number of candidates who seek for admission, the Governors have decided to build another Pavilion to comprise two wards for the accommodation of 50 additional patients.

In this Hospital there is no restriction as to the number of Governors, and the liberal manner in which it is supported is a remarkable evidence of the sympathy which the public feel for its welfare. The grave character of the cases admitted is indicated by the high mortality.

One hundred and eighty patients remained in Hospital on the 1st of April, 1892; 54 cases were admitted; 5 were discharged or resigned; 46 died during the year; and 183 remained on the 31st March, 1893.

The mortality was 90.20 per cent. on the total number of cases treated to a termination.

The time spent in Hospital by each patient averaged 275.57 days.

The average daily number of beds occupied throughout the year was 179·41.

ST. MARK'S OPHTHALMIC HOSPITAL.

This Hospital continues to maintain its high reputation for clinical teaching, and the condition of the patients bore evidence of satisfactory attention to their personal comforts. The nursing is carried out by two trained nurses, who are reported to discharge their duties, under the supervision of the Lady Superintendent, in a painstaking and conscientious manner.

The Wards were clean and orderly, but the beds were in too close proximity. We are, however, able to speak on the whole in favourable terms of this Hospital, as thoroughly fulfilling the sphere of its usefulness, allowance being made for its structural defects and limited accommodation. These defects have been several times adverted to in our former Reports.

We have been informed that the Governors are anxious to effect such an amalgamation with the National Eye and Ear Infirmary as would ensure the erection of a new hospital more useful to the public, and a greater credit to the city of Dublin.

When the terms of the draft scheme are agreed upon it is proposed that the Governors of the two hospitals should combine in a joint application to the public for the sum of £15,000, which would be necessary to erect the new Institution.

During the past year the Governors have expended a sum of over one hundred pounds on the bath-rooms, lavatories, and general sanitary arrangements, which are now as perfect as they can be made.

On the 1st of April, 1892, 48 patients were in Hospital; 640 were admitted during the year; 637 were discharged; 1 died; and 50 then remained.

The average daily number of beds occupied during the year was 44·38, and the time spent in Hospital by each patient averaged 23·54 days.

## APPENDIX.

Board of Superintendence of the  
Dublin Hospitals.

Office—35 Dawson-street,  
4th April, 1893.

SIR,—I have to acknowledge receipt of your communication of the 23rd ult. in reply to my Board's letter of the 27th February.

It was the excess of cost for maintenance, exclusive of establishment charges, that the Board of Superintendence wished to draw attention to.

The financial accounts as published in our annual reports are rendered in a uniform system so as to show whether any Hospital is extravagant in its expenditure as compared with others under our supervision.

The Meath Hospital is contrasted with Steevens's on account of its income being nearly equal, also as both Hospitals admit surgical and medical patients, and each having an out-patient department.

By referring to Table No. 2 subjoined, taken from the Thirty-fourth Report of the Board of Superintendence for the year ending 31st March, 1892, it will be seen that the cost for maintenance, exclusive of establishment charges, was £25 4s. 5d. per bed in Steevens's Hospital, as compared with £19 13s. 4½d. in the Meath Hospital.

Table of Expenditure in same report shows the outlay in your Hospital for the undermentioned items greatly in excess, as compared with the Meath Hospital:—

	Provisions.	Groceries.	Wine.	Whiskey.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Steevens's, . .	1,324 12 10	128 12 1	20 0 0	55 12 0
Meath, . . .	1,100 13 8	72 4 7	10 12 0	38 12 6

Notwithstanding the disproportion of expenditure which has prevailed for several years, the Meath Hospital maintains a larger number of patients.

The Board of Superintendence will be glad if you can offer any explanation to account for this disparity. They have called attention to the matter last year, and hope your Committee, on again investigating the subject, may be able to reduce the expenditure without interfering with the comforts of the patients.

I am, Sir, your obedient servant,

(Signed), POWERSCOURT.

H. J. Atkinson, Esq., Registrar  
Steevens's Hospital.

## Dr. Steevens's Hospital,

28th April, 1893.

MR LOAN,—I am directed by the Committee of Dr. Steevens's Hospital to acknowledge the receipt of your Lordship's letter of the 23rd of March, in which further and more explicit reference is made to the expenditure per bed in this Hospital than was contained in your letter of the 27th February last. It appears that the object of this letter was to contrast the expenditure per bed for maintenance, inclusive of establishment charges. My Committee admit that the charges are higher in Steevens's Hospital than in the Meath, but cannot on that account admit that they are excessive, nor can my Committee agree with your Lordship concluding that Steevens's Hospital is fairly comparable with the Meath. At Steevens's Hospital there are separate establishments for maternity cases among the wives of the soldiers of the Dublin Garrison, for the wives and children of the Dublin Garrison, and for the Constabulary. All these separate arrangements involve special expenses. The Committee also point out that the daily average number of beds occupied in the Meath is higher than in Steevens's during the period selected for comparison, and therefore, according to the ordinary rules of hospital economy, the expenditure should be proportionally less in the former than in the latter. The Committee exercise all the economy they can in the management of the affairs of the Hospital in all respects, and believe that the above mentioned special circumstances, together with the superior class of diet supplied to the patients, accounts for the higher cost of maintaining Steevens's as compared with the Meath Hospital.

I have the honour to be, my Lord,

Your most obedient servant,

H. J. ATKINSON, Accountant.

The Right Hon. Viscount Powerscourt, K.P.

---

 Board of Superintendence of the  
Dublin Hospitals.

Office—35 Dawson-street,

4th May, 1893.

SIR,—Referring to previous correspondence on the subject of the excess of cost for the maintenance of each bed in Steevens's Hospital (exclusive of establishment charges), as compared with the Meath Hospital, the Board of Superintendence have directed me to signify to

B

Appendix.

you, for the information of the Managing Committee of Stevens's Hospital, that the reasons assigned in your letter of the 28th ultimo for this excess of expenditure do not appear to them to be quite satisfactory.

I am, Sir, your obedient servant,

WM. J. MARTIN, Secretary.

H. J. Atkinson, Esq., Registrar,  
Stevens's Hospital.

TABLE No. 2, showing the AVERAGE COST per BED occupied throughout the year ended 31st MARCH, 1893, for MAINTENANCE, and for ESTABLISHMENT, and for both, exclusive of Buildings and furnishing such Buildings.

NAME OF HOSPITAL.	Average daily number of Beds occupied throughout the year.	Average annual cost per bed for *Maintenance.	Average annual cost per bed for †Establishment, exclusive of buildings and furnishing such buildings.	Average annual cost per bed for Maintenance and for Establishment, exclusive of buildings and furnishing such buildings.
		£ s. d.	£ s. d.	£ s. d.
Westmorland Lock, . . .	70.50	14 2 0½	25 15 4½	39 17 10½
Stevens's, . . . . .	87.02	25 4 5	37 7 0	62 12 2

THOMAS EDWARD GREY,

Registrar.

25th April, 1892.

No. 7,552

Dublin Castle,  
14th June, 1893.

SIR,

I have to acknowledge receipt of your letter of the 4th instant, forwarding, for submission to His Excellency the Lord Lieutenant, the Thirty-fifth Annual Report of the Board of Superintendence of the Dublin Hospitals.

I am, Sir,

Your obedient Servant,

D. HARREL

The Secretary,  
Board of Superintendence  
of the Dublin Hospitals,  
35, Dawson-street.
